

Levi Skye Morris

Technical executive · Engineering leader · Systems architect

Boulder, Colorado siromivel@gmail.com github.com/siromivel levisky.com

Technical executive and hands-on engineering leader with 11+ years building customer-facing products and infrastructure in financial technology, healthcare, e-commerce, and distributed systems. Promoted from senior engineer to CTO; led a globally distributed organization through growth, banking and regulatory disruption, and an orderly wind-down, while staying close to architecture, reliability, and the hardest technical problems.

CORE STRENGTHS

Leadership

Technical strategy, organization design, hiring, coaching, performance management, distributed teams, and cross-functional partnership.

Systems

Payments and settlement, customer-facing applications, platform reliability, performance engineering, sensitive data, and applied cryptography.

Operations

Regulated environments, incident response, crisis management, organizational change, and responsible wind-downs.

EXPERIENCE

SpankChain

Remote · 2019–2026

Chief Technology Officer Jul 2020–Apr 2026

Acting Head of Engineering Dec 2019–Jul 2020

Senior Software Engineer Apr 2019–Dec 2019

- Promoted from senior engineer to CTO. Led an 8–10-person engineering organization across five countries and a 10-person contracted product team in Argentina; together the teams built and operated three distinct products.
- Owned recruiting, hiring, onboarding, coaching, performance management, workforce planning, and organizational change across internal and contracted product teams.
- Set technical direction across customer-facing applications, backend services, payment workflows, data systems, and blockchain infrastructure, and stayed hands-on for the hardest implementation and production problems.
- Partnered with product designers and commercial stakeholders to define user flows, settle product and technical tradeoffs, and carry customer-facing features from concept to production; without a dedicated project manager, ran delivery planning, dependencies, and risk for engineering initiatives.
- Owned payment and settlement systems processing seven figures in transaction volume, including banking integrations, KYC/AML controls, security, reliability, and incident response.
- Maintained 99.9% platform uptime through the loss of banking partners, product de-platforming, and shifting regulatory requirements; retained roughly 80% of the core team through a major product sunset and restructuring.
- Led the technical wind-down of the company: kept security and access controls intact through staff reductions, archived regulated data, and advised leadership on the handoff of intellectual property.

CampSpot

Denver, Colorado · 2017–2019

Senior Software Engineer Sep 2017–Feb 2019

- Architected and built a custom payment-processing system, including third-party integrations, transaction workflows, failure handling, and PCI-compliant treatment of payment data.
- Built and scaled customer-facing reservation and payment systems with Java, Kotlin, TypeScript, Dropwizard, Node.js, MySQL, and React.

DocNetwork / CampDoc

Ann Arbor, Michigan · 2015–2017

Development Team Lead Aug 2015–Jun 2017

- Led a 3–5-person team building a HIPAA/FERPA-compliant electronic health record and registration platform for pediatric and educational organizations.
- Led engineering as monthly payment volume grew from six to seven figures, balancing delivery against privacy, security, data integrity, and operational health.
- Resolved severe PostgreSQL performance bottlenecks through query-plan analysis, indexing, recursive CTEs, and data-model changes.
- Built product features end to end, from requirements to production, with TypeScript, Node.js, and Angular.

SearchSpring

Colorado Springs, Colorado · 2014–2015

Integration Specialist Nov 2014–Aug 2015

- Built production e-commerce search integrations for Shopify, Magento, NetSuite, and BigCommerce.
- Tuned search relevance and diagnosed integration and production issues with Elasticsearch, Logstash, and Kibana.

Gelada Research Project

Simien Mountains, Ethiopia · 2012–2014

Field Site Manager Jun 2012–Jan 2014

- Ran personnel, logistics, safety, budgets, and research data collection at a remote, high-altitude primate field station under tight operational, financial, and physical constraints.

SELECTED WORK

Wildfire risk and edge photogrammetry

2026

Technical and business exploration

- Evaluated a localized wildfire-risk assessment service for real estate and insurance, integrating structural, topographic, vegetation, and Home Ignition Zone observations.
- Designed an edge-computing photogrammetry architecture with combined UAV and on-foot data collection for rapid 3D reconstruction and field risk reporting.
- Built a reporting pipeline that turns structured field observations into conservative, plain-language risk assessments, using constrained local inference checked by an independent auditing agent.

Computational ecology

2026

Clojure and scientific computing

- Implemented configurable Ricker population models in Clojure with automated equilibrium and cycle detection, Lyapunov exponent estimation, bifurcation analysis, and Vega-Lite visualizations.

TECHNICAL EXPERTISE

Languages: TypeScript, JavaScript, Java, Kotlin, Clojure, Python, SQL, Solidity, Vyper, R

Product and web: React, Angular, Vue, Node.js, NestJS, Express, Dropwizard, HTML, CSS

Data: PostgreSQL, MySQL, Redis, MongoDB, Elasticsearch, Logstash, Kibana

Infrastructure: AWS, GCP, Kubernetes, Docker, Terraform, Linux, KVM/QEMU

AI and agentic systems: Multi-model agentic workflows with cost- and privacy-aware routing between frontier APIs and self-hosted open-weight models (OpenCode, LiteLLM, Qwen); constrained generation; auditing agents; structured reporting pipelines

Risk and compliance: PCI, HIPAA, FERPA, KYC/AML, security, privacy, and incident response

EDUCATION AND RECOGNITION

University of Michigan · B.S., Evolutionary Anthropology · 2012

National Science Foundation · Graduate Research Fellowship Program, Honorable Mention · 2014
